

6-(2,4,6-Trihalophenyl)triazolopyrimidines, their preparation and their use for controlling harmful fungi, and compositions comprising these compounds

# Description

5

The present invention relates to 6-(2,4,6-trihalophenyl)triazolopyrimidines of the formula I

in which the substituents are as defined below:

10

$R^1$  is  $C_1$ - $C_8$ -alkyl,  $C_1$ - $C_8$ -haloalkyl,  $C_3$ - $C_8$ -cycloalkyl,  $C_3$ - $C_8$ -halocycloalkyl,  $C_2$ - $C_8$ -alkenyl,  $C_2$ - $C_8$ -haloalkenyl,  $C_3$ - $C_6$ -cycloalkenyl,  $C_3$ - $C_6$ -halocycloalkenyl,  $C_2$ - $C_8$ -alkynyl,  $C_2$ - $C_8$ -haloalkynyl or phenyl, naphthyl, or a five- or six-membered saturated, partially unsaturated or aromatic heterocycle which contains one to

15

four heteroatoms from the group consisting of O, N and S,

$R^2$  is hydrogen or one of the groups mentioned under  $R^1$ ,

20

$R^1$  and  $R^2$  together with the nitrogen atom to which they are attached may also form a five- or six-membered heterocyclyl or heteroaryl which is attached via N and may contain one to three further heteroatoms from the group consisting of O, N and S as ring members and/or may carry one or more substituents from the group consisting of halogen,  $C_1$ - $C_6$ -alkyl,  $C_1$ - $C_6$ -haloalkyl,  $C_2$ - $C_6$ -alkenyl,  $C_2$ - $C_6$ -haloalkenyl,  $C_1$ - $C_6$ -alkoxy,  $C_1$ - $C_6$ -haloalkoxy,  $C_3$ - $C_6$ -alkenyloxy,  $C_3$ - $C_6$ -haloalkenyloxy, (exo)- $C_1$ - $C_6$ -alkylene and oxy- $C_1$ - $C_3$ -alkylenoxy;

25

$R^1$  and/or  $R^2$  may carry one to four identical or different groups  $R^a$ :

30

$R^a$  is halogen, cyano, nitro, hydroxyl,  $C_1$ - $C_6$ -alkyl,  $C_1$ - $C_6$ -haloalkyl,  $C_1$ - $C_6$ -alkylcarbonyl,  $C_3$ - $C_6$ -cycloalkyl,  $C_1$ - $C_6$ -alkoxy,  $C_1$ - $C_6$ -haloalkoxy,  $C_1$ - $C_6$ -alkoxycarbonyl,  $C_1$ - $C_6$ -alkylthio,  $C_1$ - $C_6$ -alkylamino, di- $C_1$ - $C_6$ -alkylamino,  $C_2$ - $C_8$ -alkenyl,  $C_2$ - $C_8$ -haloalkenyl,  $C_2$ - $C_6$ -alkenyloxy,  $C_2$ - $C_8$ -alkynyl,  $C_2$ - $C_8$ -haloalkynyl,  $C_3$ - $C_6$ -alkynyloxy, oxy- $C_1$ - $C_3$ -alkylenoxy,  $C_3$ - $C_8$ -cycloalkenyl, phenyl, naphthyl, a five- or six-membered saturated, partially unsaturated or aromatic heterocycle which contains one to four heteroatoms from the group consisting of O, N and S, where these aliphatic, alicyclic or aromatic groups for their part may be partially or fully halogenated;

35

$L^1, L^2, L^3$  independently of one another are chlorine or fluorine, where at least one group is chlorine;

- 5 X is cyano,  $C_1$ - $C_4$ -alkyl,  $C_1$ - $C_4$ -alkoxy,  $C_3$ - $C_4$ -alkenyloxy,  $C_1$ - $C_2$ -haloalkoxy or  $C_3$ - $C_4$ -haloalkenyloxy.

Moreover, the invention relates to a process for preparing these compounds, to compositions comprising them and to their use for controlling phytopathogenic harmful  
10 fungi.

5-Halo-6-(2,4,6-trihalophenyl)triazolopyrimidines are known in a general manner from FR-A 2 784 381. 5-Cyano- and 5-alkoxytriazolopyrimidines are disclosed in WO 02/083677. Triazolopyrimidines having optically active amino substituents in the  
15 7-position are proposed in a general manner in WO 02/38565.

The compounds described in the publications mentioned above are suitable for controlling harmful fungi.

20 However, their action is not always entirely satisfactory in every respect. It is an object of the present invention to provide compounds having improved activity and/or a broader activity spectrum.

We have found that this object is achieved by the compounds defined at the outset.  
25 Moreover, we have found a process for their preparation, compositions comprising them and methods for controlling harmful fungi using the compounds I.

The compounds according to the invention differ from those described in the abovementioned publication by the substitution in the 5-position of the  
30 triazolopyrimidine skeleton.

Compared to the known compounds, the compounds of the formula I have increased activity and/or a broader activity spectrum against harmful fungi.

35 The compounds according to the invention can be obtained by different routes. Advantageously, they are obtained from the 5-halo-6-(2,4,6-trihalophenyl)triazolopyrimidines of the formula II known from FR-A 2 784 381 by reaction with compounds M-X (formula III). Depending on the meaning of the group X to be introduced, the compounds III are inorganic cyanides or alkoxides. The reaction is advantageously  
40 carried out in the presence of an inert solvent. The cation M in formula III is of little

importance; for practical reasons, ammonium, tetraalkylammonium or alkali metal or alkaline earth metal salts are usually preferred.

The reaction temperature is usually from 0 to 120°C, preferably from 10 to 40°C [cf. J. Heterocycl. Chem., Vol.12, pp. 861-863 (1975)].

If R<sup>2</sup> is hydrogen, a removable protective group is advantageously introduced prior to the reaction with III [cf. Greene, Protective Groups in Organic Chemistry, J. Wiley & Sons, (1981)].

Suitable solvents include ethers, such as dioxane, diethyl ether and, preferably, tetrahydrofuran, alcohols, such as methanol or ethanol, halogenated hydrocarbons, such as dichloromethane, and aromatic hydrocarbons, such as toluene or acetonitrile.

Compounds of the formula I in which X is C<sub>1</sub>-C<sub>4</sub>-alkyl can be obtained advantageously by the synthesis route below:

The 5-alkyl-7-hydroxy-6-phenyltriazaolopyrimidines VI are obtained from 2-aminotriazole IV and keto esters V where R is C<sub>1</sub>-C<sub>4</sub>-alkyl and L<sup>1</sup> to L<sup>3</sup> are as defined for formula I. In the formulae V and VI, X<sup>1</sup> is C<sub>1</sub>-C<sub>4</sub>-alkyl. Using the easily obtainable 2-phenylacetoacetic esters (V where X<sup>1</sup>=CH<sub>3</sub>), the 5-methyl-7-hydroxy-6-phenyltriazaolopyrimidines, which are a preferred subject-matter of the invention, are obtained [cf. Chem. Pharm. Bull., 9, 801 (1961)]. 2-Aminotriazole IV is commercially available. The starting materials V are advantageously prepared under the conditions described in EP-A 10 02 788.

The 5-alkyl-7-hydroxy-6-phenyltriazaolopyrimidines obtained in this manner are, using halogenating agents [HAL], converted under the conditions known from WO-A 94/20501 into the halopyrimidines of the formula VII in which Hal is a halogen atom, preferably a bromine or a chlorine atom, in particular a chlorine atom. Advantageous halogenating agents [HAL] are chlorinating or brominating agents, such as phosphorus oxybromide, phosphorus oxychloride, thionyl chloride, thionyl bromide

or sulfuryl chloride.

This reaction is usually carried out at from 0°C to 150°C, preferably at from 80°C to 125°C [cf. EP-A 770 615].

5

The reaction of VII with amines VIII in which R<sup>1</sup> and R<sup>2</sup> are as defined for formula I is advantageously carried out at from 0°C to 70°C, preferably from 10°C to 35°C, preferably in the presence of an inert solvent, such as an ether, for example dioxane, diethyl ether or, in particular, tetrahydrofuran, a halogenated hydrocarbon, such as dichloromethane, or an aromatic hydrocarbon, such as, for example, toluene [cf. WO-A 98/46608].

10

Preference is given to using a base, such as a tertiary amine, for example triethylamine, or an inorganic amine, such as potassium carbonate; it is also possible for excess amine of the formula VIII to serve as base.

15

Alternatively, compounds of the formula I in which X is C<sub>1</sub>-C<sub>4</sub>-alkyl can also be prepared from compounds I in which X is halogen, in particular chlorine, and malonates of the formula IX. In formula IX, X'' is hydrogen or C<sub>1</sub>-C<sub>3</sub>-alkyl and R is C<sub>1</sub>-C<sub>4</sub>-alkyl.

20

They are converted into compounds of the formula X and decarboxylated to compounds I [cf. US 5 994 360].

The malonates IX are known from the literature [J. Am. Chem. Soc. 64 (1942), 2714; J. Org. Chem. 39 (1974), 2172; Helv. Chim. Acta 61 (1978), 1565], or they can be prepared in accordance with the literature cited.

25

The subsequent hydrolysis of the ester X is carried out under generally customary conditions; depending on the different structural elements, alkaline or acidic hydrolysis of compounds X may be advantageous. Under the conditions of ester hydrolysis, there may already be complete or partial decarboxylation to I.

5

The decarboxylation is usually carried out at temperatures of from 20°C to 180°C, preferably from 50°C to 120°C, in an inert solvent, if appropriate in the presence of an acid.

- 10 Suitable acids are hydrochloric acid, sulfuric acid, phosphoric acid, formic acid, acetic acid, p-toluenesulfonic acid. Suitable solvents are water, aliphatic hydrocarbons, such as pentane, hexane, cyclohexane and petroleum ether, aromatic hydrocarbons, such as toluene, o-, m- and p-xylene, halogenated hydrocarbons, such as methylene chloride, chloroform and chlorobenzene, ethers, such as diethyl ether, diisopropyl
- 15 ether, tert-butyl methyl ether, dioxane, anisole and tetrahydrofuran, nitriles, such as acetonitrile and propionitrile, ketones, such as acetone, methyl ethyl ketone, diethyl ketone and tert-butyl methyl ketone, alcohols, such as methanol, ethanol, n-propanol, isopropanol, n-butanol and tert-butanol, and also dimethyl sulfoxide, dimethyl-formamide and dimethylacetamide; with particular preference, the reaction is carried
- 20 out in hydrochloric acid or acetic acid. It is also possible to use mixtures of the solvents mentioned.

Compounds of the formula I in which X is C<sub>1</sub>-C<sub>4</sub>-alkyl can also be obtained by coupling 5-halotriazolopyrimidines of the formula I in which X is halogen with organometallic

25 reagents of the formula XI. In one embodiment of this process, the reaction is carried out with transition metal catalysis, such as Ni or Pd catalysis.

In formula XI, M is a metal ion of valency Y, such as, for example, B, Zn or Sn, and X'' is C<sub>1</sub>-C<sub>3</sub>-alkyl. This reaction can be carried out, for example, analogously to the

30 following methods: J. Chem. Soc. Perkin Trans. 1 (1994), 1187, *ibid.* 1 (1996), 2345; WO-A 99/41255; Aust. J. Chem. 43 (1990), 733; J. Org. Chem. 43 (1978), 358; J. Chem. Soc. Chem. Commun. (1979), 866; Tetrahedron Lett. 34 (1993), 8267; *ibid.* 33 (1992), 413.

35 The reaction mixtures are worked up in a customary manner, for example by mixing with water, separating the phases and, if appropriate, chromatographic purification of the crude products. Some of the intermediates and end products are obtained in the form of colorless or slightly brownish viscous oils which are purified or freed from

volatile components under reduced pressure and at moderately elevated temperature. If the intermediates and end products are obtained as solids, purification can also be carried out by recrystallization or digestion.

- 5 If individual compounds I cannot be obtained by the routes described above, they can be prepared by derivatization of other compounds I.

- 10 If the synthesis yields mixtures of isomers, a separation is generally not necessarily required since in some cases the individual isomers can be interconverted during work-up for use or during application (for example under the action of light, acids or bases). Such conversions may also take place after use, for example in the treatment of plants in the treated plant, or in the harmful fungus to be controlled.

- 15 In the definitions of the symbols given in the formulae above, collective terms were used which are generally representative of the following substituents:

halogen: fluorine, chlorine, bromine and iodine;

- 20 alkyl: saturated straight-chain or branched hydrocarbon radicals having 1 to 4, 6 or 8 carbon atoms, for example C<sub>1</sub>-C<sub>6</sub>-alkyl such as methyl, ethyl, propyl, 1-methylethyl, butyl, 1-methylpropyl, 2-methylpropyl, 1,1-dimethylethyl, pentyl, 1-methylbutyl, 2-methylbutyl, 3-methylbutyl, 2,2-dimethylpropyl, 1-ethylpropyl, hexyl, 1,1-dimethylpropyl, 1,2-dimethylpropyl, 1-methylpentyl, 2-methylpentyl, 3-methylpentyl, 4-methylpentyl, 1,1-dimethylbutyl, 1,2-dimethylbutyl, 1,3-dimethylbutyl, 2,2-dimethylbutyl, 2,3-
- 25 dimethylbutyl, 3,3-dimethylbutyl, 1-ethylbutyl, 2-ethylbutyl, 1,1,2-trimethylpropyl, 1,2,2-trimethylpropyl, 1-ethyl-1-methylpropyl and 1-ethyl-2-methylpropyl;

- haloalkyl: straight-chain or branched alkyl groups having 1 to 2, 4, 6 or 8 carbon atoms (as mentioned above), where in these groups some or all of the hydrogen atoms may
- 30 be replaced by halogen atoms as mentioned above; in particular, C<sub>1</sub>-C<sub>2</sub>-haloalkyl, such as chloromethyl, bromomethyl, dichloromethyl, trichloromethyl, fluoromethyl, difluoromethyl, trifluoromethyl, chlorofluoromethyl, dichlorofluoromethyl, chlorodifluoromethyl, 1-chloroethyl, 1-bromoethyl, 1-fluoroethyl, 2-fluoroethyl, 2,2-difluoroethyl, 2,2,2-trifluoroethyl, 2-chloro-2-fluoroethyl, 2-chloro-2,2-difluoroethyl,
- 35 2,2-dichloro-2-fluoroethyl, 2,2,2-trichloroethyl, pentafluoroethyl or 1,1,1-trifluoroprop-2-yl;

- alkenyl: unsaturated straight-chain or branched hydrocarbon radicals having 2 to 4, 6, 8 or 10 carbon atoms and one or two double bonds in any position, for example C<sub>2</sub>-C<sub>6</sub>-
- 40 alkenyl, such as ethenyl, 1-propenyl, 2-propenyl, 1-methylethenyl, 1-butenyl, 2-butenyl,

3-butenyl, 1-methyl-1-propenyl, 2-methyl-1-propenyl, 1-methyl-2-propenyl, 2-methyl-2-propenyl, 1-pentenyl, 2-pentenyl, 3-pentenyl, 4-pentenyl, 1-methyl-1-butenyl, 2-methyl-1-butenyl, 3-methyl-1-butenyl, 1-methyl-2-butenyl, 2-methyl-2-butenyl, 3-methyl-2-butenyl, 1-methyl-3-butenyl, 2-methyl-3-butenyl, 3-methyl-3-butenyl, 1,1-dimethyl-2-propenyl, 1,2-dimethyl-1-propenyl, 1,2-dimethyl-2-propenyl, 1-ethyl-1-propenyl, 1-ethyl-2-propenyl, 1-hexenyl, 2-hexenyl, 3-hexenyl, 4-hexenyl, 5-hexenyl, 1-methyl-1-pentenyl, 2-methyl-1-pentenyl, 3-methyl-1-pentenyl, 4-methyl-1-pentenyl, 1-methyl-2-pentenyl, 2-methyl-2-pentenyl, 3-methyl-2-pentenyl, 4-methyl-2-pentenyl, 1-methyl-3-pentenyl, 2-methyl-3-pentenyl, 3-methyl-3-pentenyl, 4-methyl-3-pentenyl, 1-methyl-4-pentenyl, 2-methyl-4-pentenyl, 3-methyl-4-pentenyl, 4-methyl-4-pentenyl, 1,1-dimethyl-2-butenyl, 1,1-dimethyl-3-butenyl, 1,2-dimethyl-1-butenyl, 1,2-dimethyl-2-butenyl, 1,2-dimethyl-3-butenyl, 1,3-dimethyl-1-butenyl, 1,3-dimethyl-2-butenyl, 1,3-dimethyl-3-butenyl, 2,2-dimethyl-3-butenyl, 2,3-dimethyl-1-butenyl, 2,3-dimethyl-2-butenyl, 2,3-dimethyl-3-butenyl, 3,3-dimethyl-1-butenyl, 3,3-dimethyl-2-butenyl, 1-ethyl-1-butenyl, 1-ethyl-2-butenyl, 1-ethyl-3-butenyl, 2-ethyl-1-butenyl, 2-ethyl-2-butenyl, 2-ethyl-3-butenyl, 1,1,2-trimethyl-2-propenyl, 1-ethyl-1-methyl-2-propenyl, 1-ethyl-2-methyl-1-propenyl and 1-ethyl-2-methyl-2-propenyl;

haloalkenyl: unsaturated straight-chain or branched hydrocarbon radicals having 2 to 8 carbon atoms and one or two double bonds in any position (as mentioned above), where in these groups some or all of the hydrogen atoms may be replaced by halogen atoms as mentioned above, in particular by fluorine, chlorine and bromine;

alkynyl: straight-chain or branched hydrocarbon groups having 2 to 4, 6 or 8 carbon atoms and one or two triple bonds in any position, for example  $C_2$ - $C_6$ -alkynyl, such as ethynyl, 1-propynyl, 2-propynyl, 1-butylnyl, 2-butylnyl, 3-butylnyl, 1-methyl-2-propynyl, 1-pentylnyl, 2-pentylnyl, 3-pentylnyl, 4-pentylnyl, 1-methyl-2-butylnyl, 1-methyl-3-butylnyl, 2-methyl-3-butylnyl, 3-methyl-1-butylnyl, 1,1-dimethyl-2-propynyl, 1-ethyl-2-propynyl, 1-hexynyl, 2-hexynyl, 3-hexynyl, 4-hexynyl, 5-hexynyl, 1-methyl-2-pentylnyl, 1-methyl-3-pentylnyl, 1-methyl-4-pentylnyl, 2-methyl-3-pentylnyl, 2-methyl-4-pentylnyl, 3-methyl-1-pentylnyl, 3-methyl-4-pentylnyl, 4-methyl-1-pentylnyl, 4-methyl-2-pentylnyl, 1,1-dimethyl-2-butylnyl, 1,1-dimethyl-3-butylnyl, 1,2-dimethyl-3-butylnyl, 2,2-dimethyl-3-butylnyl, 3,3-dimethyl-1-butylnyl, 1-ethyl-2-butylnyl, 1-ethyl-3-butylnyl, 2-ethyl-3-butylnyl and 1-ethyl-1-methyl-2-propynyl;

cycloalkyl: mono- or bicyclic saturated hydrocarbon groups having 3 to 6 or 8 carbon ring members, for example  $C_3$ - $C_8$ -cycloalkyl such as cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl, cycloheptyl and cyclooctyl;

five- to six-membered saturated, partially unsaturated or aromatic heterocycle which

contains one to four heteroatoms from the group consisting of O, N and S:

- 5- or 6-membered heterocyclyl which contains one to three nitrogen atoms and/or one oxygen or sulfur atom or one or two oxygen and/or sulfur atoms, for example 2-tetrahydrofuranyl, 3-tetrahydrofuranyl, 2-tetrahydrothienyl, 3-tetrahydrothienyl, 2-pyrrolidinyl, 3-pyrrolidinyl, 3-isoxazolidinyl, 4-isoxazolidinyl, 5-isoxazolidinyl, 3-isothiazolidinyl, 4-isothiazolidinyl, 5-isothiazolidinyl, 3-pyrazolidinyl, 4-pyrazolidinyl, 5-pyrazolidinyl, 2-oxazolidinyl, 4-oxazolidinyl, 5-oxazolidinyl, 2-thiazolidinyl, 4-thiazolidinyl, 5-thiazolidinyl, 2-imidazolidinyl, 4-imidazolidinyl, 2-pyrrolin-2-yl, 2-pyrrolin-3-yl, 3-pyrrolin-2-yl, 3-pyrrolin-3-yl, 2-piperidinyl, 3-piperidinyl, 4-piperidinyl, 1,3-dioxan-5-yl, 2-tetrahydropyranyl, 4-tetrahydropyranyl, 2-tetrahydrothienyl, 3-hexahydropyridazinyl, 4-hexahydropyridazinyl, 2-hexahydropyrimidinyl, 4-hexahydropyrimidinyl, 5-hexahydropyrimidinyl and 2-piperazinyl;
- 5-membered heteroaryl which contains one to four nitrogen atoms or one to three nitrogen atoms and one sulfur or oxygen atom: 5-membered heteroaryl groups which, in addition to carbon atoms, may contain one to four nitrogen atoms or one to three nitrogen atoms and one sulfur or oxygen atom as ring members, for example 2-furyl, 3-furyl, 2-thienyl, 3-thienyl, 2-pyrrolyl, 3-pyrrolyl, 3-pyrazolyl, 4-pyrazolyl, 5-pyrazolyl, 2-oxazolyl, 4-oxazolyl, 5-oxazolyl, 2-thiazolyl, 4-thiazolyl, 5-thiazolyl, 2-imidazolyl, 4-imidazolyl and 1,3,4-triazol-2-yl;
- 6-membered heteroaryl which contains one to three or one to four nitrogen atoms: 6-membered heteroaryl groups which, in addition to carbon atoms, may contain one to three or one to four nitrogen atoms as ring members, for example 2-pyridinyl, 3-pyridinyl, 4-pyridinyl, 3-pyridazinyl, 4-pyridazinyl, 2-pyrimidinyl, 4-pyrimidinyl, 5-pyrimidinyl and 2-pyrazinyl;

alkylene: saturated straight-chain or branched hydrocarbon radicals having 1 to 4 or 6 carbon atoms, which radicals are attached to the skeleton via a double bond, for example  $=CH_2$ ,  $=CH-CH_3$ ,  $=CH-CH_2-CH_3$ ;

oxyalkyleneoxy: divalent unbranched chains of 1 to 3  $CH_2$  groups, where both valencies are attached to the skeleton via an oxygen atom, for example  $OCH_2O$ ,  $OCH_2CH_2O$  and  $OCH_2CH_2CH_2O$ .

The scope of the present invention includes the (R)- and (S)-isomers and the racemates of compounds of the formula I having chiral centers.

With a view to the intended use of the triazolopyrimidines of the formula I, particular

preference is given to the following meanings of the substituents, in each case on their own or in combination:

- 5 Preference is given to compounds I in which R<sup>1</sup> is C<sub>1</sub>-C<sub>4</sub>-alkyl, C<sub>2</sub>-C<sub>6</sub>-alkenyl or C<sub>1</sub>-C<sub>8</sub>-haloalkyl.

Preference is given to compounds I in which R<sup>1</sup> is a group A:

in which

10

Z<sup>1</sup> is hydrogen, fluorine or C<sub>1</sub>-C<sub>6</sub>-fluoroalkyl,

Z<sup>2</sup> is hydrogen or fluorine, or

Z<sup>1</sup> and Z<sup>2</sup> together form a double bond;

q is 0 or 1; and

15

R<sup>3</sup> is hydrogen or methyl.

Moreover, preference is given to compounds I in which R<sup>1</sup> is C<sub>3</sub>-C<sub>6</sub>-cycloalkyl which may be substituted by C<sub>1</sub>-C<sub>4</sub>-alkyl.

Particular preference is given to compounds I in which R<sup>2</sup> is hydrogen.

20

Preference is likewise given to compounds I in which R<sup>2</sup> is methyl or ethyl.

If R<sup>1</sup> and/or R<sup>2</sup> comprise haloalkyl or haloalkenyl groups having a center of chirality, the (S)-isomers are preferred for these groups. In the case of halogen-free alkyl or alkenyl groups having a center of chirality in R<sup>1</sup> or R<sup>2</sup>, preference is given to the (R)-configured isomers.

25

Preference is furthermore given to compounds of the formula I in which L<sup>1</sup>, L<sup>2</sup> and L<sup>3</sup> are chlorine.

30

A preferred embodiment of the invention relates to compounds of the formula I.1:

in which

G is C<sub>2</sub>-C<sub>6</sub>-alkyl, in particular ethyl, n- or isopropyl, n-, sec-, tert-butyl, and C<sub>1</sub>-C<sub>4</sub>-

alkoxymethyl, in particular ethoxymethyl, or C<sub>3</sub>-C<sub>6</sub>-cycloalkyl, in particular cyclopentyl or cyclohexyl;

R<sup>2</sup> is hydrogen or methyl; and

X is defined as for formula I and in particular cyano, methoxy or ethoxy.

5

A further preferred embodiment of the invention relates to compounds of the formula I.2

in which Y is hydrogen or C<sub>1</sub>-C<sub>4</sub>-alkyl, in particular methyl and ethyl, and X is defined as for formula I and in particular cyano, methoxy or ethoxy.

10

A further preferred embodiment of the invention relates to compounds in which R<sup>1</sup> and R<sup>2</sup> together with the nitrogen atom to which they are attached form a five- or six-membered heterocyclyl or heteroaryl which is attached via N and may contain a further heteroatom from the group consisting of O, N and S as ring member and/or may carry one or more substituents from the group consisting of halogen, C<sub>1</sub>-C<sub>6</sub>-alkyl, C<sub>1</sub>-C<sub>6</sub>-haloalkyl, C<sub>2</sub>-C<sub>6</sub>-alkenyl, C<sub>2</sub>-C<sub>6</sub>-haloalkenyl, C<sub>1</sub>-C<sub>6</sub>-alkoxy, C<sub>1</sub>-C<sub>6</sub>-haloalkoxy, C<sub>3</sub>-C<sub>6</sub>-alkenyloxy, C<sub>3</sub>-C<sub>6</sub>-haloalkenyloxy, C<sub>1</sub>-C<sub>6</sub>-alkylene and oxy-C<sub>1</sub>-C<sub>3</sub>-alkylenoxy. These compounds correspond in particular to formula I.3

15

20 in which

D together with the nitrogen atom forms a five- or six-membered heterocyclyl or heteroaryl which is attached via N and may contain a further heteroatom from the group consisting of O, N and S as ring member and/or may carry one or more substituents from the group consisting of halogen, C<sub>1</sub>-C<sub>6</sub>-alkyl, C<sub>1</sub>-C<sub>6</sub>-haloalkyl, C<sub>2</sub>-C<sub>6</sub>-alkenyl, C<sub>2</sub>-C<sub>6</sub>-haloalkenyl, C<sub>1</sub>-C<sub>6</sub>-alkoxy, C<sub>1</sub>-C<sub>6</sub>-haloalkoxy, C<sub>3</sub>-C<sub>6</sub>-alkenyloxy, C<sub>3</sub>-C<sub>6</sub>-haloalkenyloxy, (exo)-C<sub>1</sub>-C<sub>6</sub>-alkylene and oxy-C<sub>1</sub>-C<sub>3</sub>-alkylenoxy; and

25

X is defined as for formula I and in particular cyano, methoxy or ethoxy.

Particular preference is given to compounds of the formula I.3 in which the groups L<sup>1</sup>, L<sup>2</sup> and L<sup>3</sup> are as defined below:

30

L<sup>1</sup> is chlorine, L<sup>2</sup> and L<sup>3</sup> are fluorine;  
 L<sup>1</sup> is fluorine, L<sup>2</sup> is chlorine and L<sup>3</sup> is fluorine;  
 L<sup>1</sup> and L<sup>2</sup> are fluorine and L<sup>3</sup> is chlorine; or  
 L<sup>1</sup> is chlorine, L<sup>2</sup> is fluorine and L<sup>3</sup> is chlorine.

5

Preference is further given to compounds I in which R<sup>1</sup> and R<sup>2</sup> together with the nitrogen atom to which they are attached form a piperidinyl, morpholinyl or thiomorpholinyl ring, in particular a piperidinyl ring which, if appropriate, is substituted by one to three groups halogen, C<sub>1</sub>-C<sub>4</sub>-alkyl or C<sub>1</sub>-C<sub>4</sub>-haloalkyl. Particular preference is given to the compounds in which R<sup>1</sup> and R<sup>2</sup> together with the nitrogen atom to which they are attached form a 4-methylpiperidine ring.

10

The invention furthermore preferably provides compounds I in which R<sup>1</sup> and R<sup>2</sup> together with the nitrogen atom to which they are attached form a pyrazole ring which, if appropriate, is substituted by one or two groups halogen, C<sub>1</sub>-C<sub>4</sub>-alkyl or C<sub>1</sub>-C<sub>4</sub>-haloalkyl, in particular by 3,5-dimethyl or 3,5-di(trifluoromethyl).

15

In addition, particular preference is given to compounds of the formula I in which R<sup>1</sup> is CH(CH<sub>3</sub>)-CH<sub>2</sub>CH<sub>3</sub>, CH(CH<sub>3</sub>)-CH(CH<sub>3</sub>)<sub>2</sub>, CH(CH<sub>3</sub>)-C(CH<sub>3</sub>)<sub>3</sub>, CH(CH<sub>3</sub>)-CF<sub>3</sub>, CH<sub>2</sub>C(CH<sub>3</sub>)=CH<sub>2</sub>, CH<sub>2</sub>CH=CH<sub>2</sub>, cyclopentyl or cyclohexyl; R<sup>2</sup> is hydrogen or methyl; or R<sup>1</sup> and R<sup>2</sup> together are -(CH<sub>2</sub>)<sub>2</sub>CH(CH<sub>3</sub>)(CH<sub>2</sub>)<sub>2</sub>-, -(CH<sub>2</sub>)<sub>2</sub>CH(CF<sub>3</sub>)(CH<sub>2</sub>)<sub>2</sub>- or -(CH<sub>2</sub>)<sub>2</sub>O(CH<sub>2</sub>)<sub>2</sub>-.

20

Furthermore, particular preference is given to compounds I in which X is cyano, methoxy or ethoxy, in particular cyano or methoxy.

25

In another preferred embodiment of the compounds of the formula I, X is methyl.

30

In particular with a view to their use, preference is given to the compounds I compiled in the tables below. Moreover, the groups mentioned for a substituent in these tables are per se, independently of the combination in which they are mentioned, a particularly preferred embodiment of the substituent in question.

#### Table 1

Compounds of the formula I in which L<sup>1</sup>, L<sup>2</sup> and L<sup>3</sup> are chlorine, X is cyano and the combination of R<sup>1</sup> and R<sup>2</sup> corresponds for each compound to one row of table A

35

#### Table 2

Compounds of the formula I in which L<sup>1</sup> is fluorine, L<sup>2</sup> and L<sup>3</sup> are chlorine, X is cyano and the combination of R<sup>1</sup> and R<sup>2</sup> corresponds for each compound to one row of table A

40

## Table 3

Compounds of the formula I in which L<sup>1</sup> is chlorine, L<sup>2</sup> is fluorine and L<sup>3</sup> is chlorine, X is cyano and the combination of R<sup>1</sup> and R<sup>2</sup> corresponds for each compound to one row of table A

5

## Table 4

Compounds of the formula I in which L<sup>1</sup> and L<sup>2</sup> are fluorine and L<sup>3</sup> is chlorine, X is cyano and the combination of R<sup>1</sup> and R<sup>2</sup> corresponds for each compound to one row of table A

10

## Table 5

Compounds of the formula I in which L<sup>1</sup> and L<sup>3</sup> are fluorine, L<sup>2</sup> is chlorine, X is cyano and the combination of R<sup>1</sup> and R<sup>2</sup> corresponds for each compound to one row of table A

15

## Table 6

Compounds of the formula I in which L<sup>1</sup>, L<sup>2</sup> and L<sup>3</sup> are chlorine, X is methoxy and the combination of R<sup>1</sup> and R<sup>2</sup> corresponds for each compound to one row of table A

20

## Table 7

Compounds of the formula I in which L<sup>1</sup> is fluorine, L<sup>2</sup> and L<sup>3</sup> are chlorine, X is methoxy and the combination of R<sup>1</sup> and R<sup>2</sup> corresponds for each compound to one row of table A

25

## Table 8

Compounds of the formula I in which L<sup>1</sup> is chlorine, L<sup>2</sup> is fluorine and L<sup>3</sup> is chlorine, X is methoxy and the combination of R<sup>1</sup> and R<sup>2</sup> corresponds for each compound to one row of table A

30

## Table 9

Compounds of the formula I in which L<sup>1</sup> and L<sup>2</sup> are fluorine and L<sup>3</sup> is chlorine, X is methoxy and the combination of R<sup>1</sup> and R<sup>2</sup> corresponds for each compound to one row of table A

35

## Table 10

Compounds of the formula I in which L<sup>1</sup> and L<sup>3</sup> are fluorine, L<sup>2</sup> is chlorine, X is methoxy and the combination of R<sup>1</sup> and R<sup>2</sup> corresponds for each compound to one row of table A

40

## Table 11

Compounds of the formula I in which  $L^1$ ,  $L^2$  and  $L^3$  are chlorine, X is ethoxy and the combination of  $R^1$  and  $R^2$  corresponds for each compound to one row of table A

## 5 Table 12

Compounds of the formula I in which  $L^1$  is fluorine,  $L^2$  and  $L^3$  are chlorine, X is ethoxy and the combination of  $R^1$  and  $R^2$  corresponds for each compound to one row of table A

## 10 Table 13

Compounds of the formula I in which  $L^1$  is chlorine,  $L^2$  is fluorine and  $L^3$  is chlorine, X is ethoxy and the combination of  $R^1$  and  $R^2$  corresponds for each compound to one row of table A

## 15 Table 14

Compounds of the formula I in which  $L^1$  and  $L^2$  are fluorine and  $L^3$  is chlorine, X is ethoxy and the combination of  $R^1$  and  $R^2$  corresponds for each compound to one row of table A

## 20 Table 15

Compounds of the formula I in which  $L^1$  and  $L^3$  are fluorine,  $L^2$  is chlorine, X is ethoxy and the combination of  $R^1$  and  $R^2$  corresponds for each compound to one row of table A

## 25 Table 16

Compounds of the formula I in which  $L^1$ ,  $L^2$  and  $L^3$  are chlorine, X is methyl and the combination of  $R^1$  and  $R^2$  corresponds for each compound to one row of table A

## Table 17

30 Compounds of the formula I in which  $L^1$  is fluorine,  $L^2$  and  $L^3$  are chlorine, X is methyl and the combination of  $R^1$  and  $R^2$  corresponds for each compound to one row of table A

## Table 18

35 Compounds of the formula I in which  $L^1$  is chlorine,  $L^2$  is fluorine and  $L^3$  is chlorine, X is methyl and the combination of  $R^1$  and  $R^2$  corresponds for each compound to one row of table A

## Table 19

Compounds of the formula I in which  $L^1$  and  $L^2$  are fluorine and  $L^3$  is chlorine, X is methyl and the combination of  $R^1$  and  $R^2$  corresponds for each compound to one row of table A

5 Table 20

Compounds of the formula I in which  $L^1$  and  $L^3$  are fluorine,  $L^2$  is chlorine, X is methyl and the combination of  $R^1$  and  $R^2$  corresponds for each compound to one row of table A

The compounds I are suitable as fungicides. They are distinguished by an outstanding effectiveness against a broad spectrum of phytopathogenic fungi, especially from the classes of the *Ascomycetes*, *Deuteromycetes*, *Oomycetes* and *Basidiomycetes*. Some are systemically effective and they can be used in plant protection as foliar and soil fungicides.

They are particularly important in the control of a multitude of fungi on various cultivated plants, such as wheat, rye, barley, oats, rice, maize, grass, bananas, cotton, soya, coffee, sugar cane, vines, fruits and ornamental plants, and vegetables, such as cucumbers, beans, tomatoes, potatoes and cucurbits, and on the seeds of these plants.

They are especially suitable for controlling the following plant diseases:

- *Alternaria* species on fruit and vegetables,
- *Bipolaris* and *Drechslera* species on cereals, rice and lawns,
- *Blumeria graminis* (powdery mildew) on cereals,
- *Botrytis cinerea* (gray mold) on strawberries, vegetables, ornamental plants and grapevines,
- *Erysiphe cichoracearum* and *Sphaerotheca fuliginea* on cucurbits,

- *Fusarium* and *Verticillium* species on various plants,
  - *Mycosphaerella* species on cereals, bananas and peanuts,
  - *Phytophthora infestans* on potatoes and tomatoes,
  - *Plasmopara viticola* on grapevines,
  - 5 • *Podosphaera leucotricha* on apples,
  - *Pseudocercospora herpotrichoides* on wheat and barley,
  - *Pseudoperonospora* species on hops and cucumbers,
  - *Puccinia* species on cereals,
  - *Pyricularia oryzae* on rice,
  - 10 • *Rhizoctonia* species on cotton, rice and lawns,
  - *Septoria tritici* and *Stagonospora nodorum* on wheat,
  - *Uncinula necator* on grapevines,
  - *Ustilago* species on cereals and sugar cane, and
  - *Venturia* species (scab) on apples and pears.
- 15 The compounds I are also suitable for controlling harmful fungi, such as *Paecilomyces variotii*, in the protection of materials (e.g. wood, paper, paint dispersions, fibers or fabrics) and in the protection of stored products.
- 20 The compounds I are employed by treating the fungi or the plants, seeds, materials or soil to be protected from fungal attack with a fungicidally effective amount of the active compounds. The application can be carried out both before and after the infection of the materials, plants or seeds by the fungi.
- 25 The fungicidal compositions generally comprise between 0.1 and 95%, preferably between 0.5 and 90%, by weight of active compound.
- When employed in plant protection, the amounts applied are, depending on the kind of effect desired, between 0.01 and 2.0 kg of active compound per ha.
- 30 In seed treatment, amounts of active compound of 1 to 1000 g/100 kg, preferably 5 to 100 g, per 100 kilogram of seed are generally required.
- When used in the protection of materials or stored products, the amount of active compound applied depends on the kind of application area and on the desired effect. Amounts customarily applied in the protection of materials are, for example, 0.001 g to 2 kg, preferably 0.005 g to 1 kg, of active compound per cubic meter of treated material.
- 35

The compounds I can be converted into the customary formulations, for example solutions, emulsions, suspensions, dusts, powders, pastes and granules. The application form depends on the particular purpose; in each case, it should ensure a fine and uniform distribution of the compound according to the invention.

5

The formulations are prepared in a known manner, for example by extending the active compound with solvents and/or carriers, if desired using emulsifiers and dispersants. Solvents/auxiliaries which are suitable are essentially:

- 10       - water, aromatic solvents (for example Solvesso products, xylene), paraffins (for example mineral oil fractions), alcohols (for example methanol, butanol, pentanol, benzyl alcohol), ketones (for example cyclohexanone, gamma-butyrolactone), pyrrolidones (NMP, NOP), acetates (glycol diacetate), glycols, fatty acid dimethylamides, fatty acids and fatty acid esters. In principle, solvent mixtures may also be used,
- 15       - carriers such as ground natural minerals (for example kaolins, clays, talc, chalk) and ground synthetic minerals (for example highly disperse silica, silicates); emulsifiers such as nonionic and anionic emulsifiers (for example polyoxyethylene fatty alcohol ethers, alkylsulfonates and arylsulfonates) and dispersants such as lignosulfite waste liquors and methylcellulose.

20

Suitable surfactants are alkali metal, alkaline earth metal and ammonium salts of lignosulfonic acid, naphthalenesulfonic acid, phenolsulfonic acid, dibutynaphthalenesulfonic acid, alkylarylsulfonates, alkyl sulfates, alkylsulfonates, fatty alcohol sulfates, fatty acids and sulfated fatty alcohol glycol ethers, furthermore  
 25       condensates of sulfonated naphthalene and naphthalene derivatives with formaldehyde, condensates of naphthalene or of naphthalenesulfonic acid with phenol and formaldehyde, polyoxyethylene octylphenol ether, ethoxylated isooctylphenol, octylphenol, nonylphenol, alkylphenol polyglycol ethers, tributylphenyl polyglycol ether, tristearylphenyl polyglycol ether, alkylaryl polyether alcohols, alcohol and fatty  
 30       alcohol/ethylene oxide condensates, ethoxylated castor oil, polyoxyethylene alkyl ethers, ethoxylated polyoxypropylene, lauryl alcohol polyglycol ether acetal, sorbitol esters, lignosulfite waste liquors and methylcellulose.

Suitable for the preparation of directly sprayable solutions, emulsions, pastes or oil  
 35       dispersions are mineral oil fractions of medium to high boiling point, such as kerosene or diesel oil, furthermore coal tar oils and oils of vegetable or animal origin, aliphatic, cyclic and aromatic hydrocarbons, for example toluene, xylene, paraffin, tetrahydronaphthalene, alkylated naphthalenes or their derivatives, methanol, ethanol,

propanol, butanol, cyclohexanol, cyclohexanone, isophorone, strongly polar solvents, for example dimethyl sulfoxide, N-methylpyrrolidone and water.

5 Powders, materials for spreading and dustable products can be prepared by mixing or concomitantly grinding the active substances with a solid carrier.

Granules, for example coated granules, impregnated granules and homogeneous granules, can be prepared by binding the active compounds to solid carriers. Examples of solid carriers are mineral earths such as silica gels, silicates, talc, kaolin, attaclay, 10 limestone, lime, chalk, bole, loess, clay, dolomite, diatomaceous earth, calcium sulfate, magnesium sulfate, magnesium oxide, ground synthetic materials, fertilizers, such as, for example, ammonium sulfate, ammonium phosphate, ammonium nitrate, ureas, and products of vegetable origin, such as cereal meal, tree bark meal, wood meal and nutshell meal, cellulose powders and other solid carriers.

15

In general, the formulations comprise from 0.01 to 95% by weight, preferably from 0.1 to 90% by weight, of the active compound. The active compounds are employed in a purity of from 90% to 100%, preferably 95% to 100% (according to NMR spectrum).

20 The following are examples of formulations: 1. Products for dilution with water

A Water-soluble concentrates (SL)

10 parts by weight of a compound according to the invention are dissolved in water or in a water-soluble solvent. As an alternative, wetters or other auxiliaries are added. The 25 active compound dissolves upon dilution with water.

B Dispersible concentrates (DC)

20 parts by weight of a compound according to the invention are dissolved in cyclohexanone with addition of a dispersant, for example polyvinylpyrrolidone. Dilution 30 with water gives a dispersion.

C Emulsifiable concentrates (EC)

15 parts by weight of a compound according to the invention are dissolved in xylene with addition of calcium dodecylbenzenesulfonate and castor oil ethoxylate (in each 35 case 5%). Dilution with water gives an emulsion.

D Emulsions (EW, EO)

40 parts by weight of a compound according to the invention are dissolved in xylene

with addition of calcium dodecylbenzenesulfonate and castor oil ethoxylate (in each case 5%). This mixture is introduced into water by means of an emulsifying machine (Ultraturrax) and made into a homogeneous emulsion. Dilution with water gives an emulsion.

5

#### E Suspensions (SC, OD)

In an agitated ball mill, 20 parts by weight of a compound according to the invention are comminuted with addition of dispersants, wetters and water or an organic solvent to give a fine active compound suspension. Dilution with water gives a stable suspension of the active compound.

10

#### F Water-dispersible granules and water-soluble granules (WG, SG)

50 parts by weight of a compound according to the invention are ground finely with addition of dispersants and wetters and made into water-dispersible or water-soluble granules by means of technical appliances (for example extrusion, spray tower, fluidized bed). Dilution with water gives a stable dispersion or solution of the active compound.

15

#### G Water-dispersible powders and water-soluble powders (WP, SP)

75 parts by weight of a compound according to the invention are ground in a rotor-stator mill with addition of dispersants, wetters and silica gel. Dilution with water gives a stable dispersion or solution of the active compound.

20

#### 2. Products to be applied undiluted

25

#### H Dustable powders (DP)

5 parts by weight of a compound according to the invention are ground finely and mixed intimately with 95% of finely divided kaolin. This gives a dustable product.

30

#### I Granules (GR, FG, GG, MG)

0.5 part by weight of a compound according to the invention is ground finely and associated with 95.5% carriers. Current methods are extrusion, spray-drying or the fluidized bed. This gives granules to be applied undiluted.

35

#### J ULV solutions (UL)

10 parts by weight of a compound according to the invention are dissolved in an organic solvent, for example xylene. This gives a product to be applied undiluted.

The active compounds can be used as such, in the form of their formulations or the use forms prepared therefrom, for example in the form of directly sprayable solutions,

40

powders, suspensions or dispersions, emulsions, oil dispersions, pastes, dustable products, materials for spreading, or granules, by means of spraying, atomizing, dusting, spreading or pouring. The use forms depend entirely on the intended purposes; the intention is to ensure in each case the finest possible distribution of the active compounds according to the invention.

Aqueous use forms can be prepared from emulsion concentrates, pastes or wettable powders (sprayable powders, oil dispersions) by adding water. To prepare emulsions, pastes or oil dispersions, the substances, as such or dissolved in an oil or solvent, can be homogenized in water by means of a wetter, tackifier, dispersant or emulsifier. Alternatively, it is possible to prepare concentrates composed of active substance, wetter, tackifier, dispersant or emulsifier and, if appropriate, solvent or oil, and such concentrates are suitable for dilution with water.

The active compound concentrations in the ready-to-use preparations can be varied within relatively wide ranges. In general, they are from 0.0001 to 10%, preferably from 0.01 to 1%.

The active compounds may also be used successfully in the ultra-low-volume process (ULV), by which it is possible to apply formulations comprising over 95% by weight of active compound, or even to apply the active compound without additives.

Various types of oils, wetters, adjuvants, herbicides, fungicides, other pesticides, or bactericides may be added to the active compounds, if appropriate not until immediately prior to use (tank mix). These agents can be admixed with the agents according to the invention in a weight ratio of 1:10 to 10:1.

The compositions according to the invention can, in the use form as fungicides, also be present together with other active compounds, e.g. with herbicides, insecticides, growth regulators, fungicides or else with fertilizers. Mixing the compounds I or the compositions comprising them in the application form as fungicides with other fungicides results in many cases in an expansion of the fungicidal spectrum of activity being obtained.

The following list of fungicides, in conjunction with which the compounds according to the invention can be used, is intended to illustrate the possible combinations but does not limit them:

- acylalanines, such as benalaxyl, metalaxyl, ofurace or oxadixyl,
- amine derivatives, such as aldimorph, dodine, dodemorph, fenpropimorph, fenpropidin, guazatine, iminoctadine, spiroxamine or tridemorph,
- anilinopyrimidines, such as pyrimethanil, mepanipyrim or cyrodinyl,
- 5 • antibiotics, such as cycloheximide, griseofulvin, kasugamycin, natamycin, polyoxin or streptomycin,
- azoles, such as bitertanol, bromoconazole, cyproconazole, difenoconazole, dinitroconazole, enilconazole, epoxiconazole, fenbuconazole, fluquiconazole, flusilazole, hexaconazole, imazalil, metconazole, myclobutanil, penconazole,
- 10 propiconazole, prochloraz, prothioconazole, tebuconazole, triadimefon, triadimenol, triflumizole or triticonazole,
- dicarboximides, such as iprodione, myclozolin, procymidone or vinclozolin,
- dithiocarbamates, such as ferbam, nabam, maneb, mancozeb, metam, metiram, propineb, polycarbamate, thiram, ziram or zineb,
- 15 • heterocyclic compounds, such as anilazine, benomyl, boscalid, carbendazim, carboxin, oxycarboxin, cyazofamid, dazomet, dithianon, famoxadone, fenamidone, fenarimol, fuberidazole, flutolanil, furametpyr, isoprothiolane, mepronil, nuarimol, probenazole, proquinazid, pyrifenox, pyroquilon, quinoxifen, silthiofam, thiabendazole, thifluzamide, thiophanate-methyl, tiadinil, tricyclazole or triforine,
- 20 • copper fungicides, such as Bordeaux mixture, copper acetate, copper oxychloride or basic copper sulfate,
- nitrophenyl derivatives, such as binapacryl, dinocap, dinobuton or nitrophthal-isopropyl,
- phenylpyrroles, such as fenpiclonil or fludioxonil,
- 25 • sulfur,
- other fungicides, such as acibenzolar-S-methyl, benthialvalicarb, carpropamid, chlorothalonil, cyflufenamid, cymoxanil, dazomet, diclomezine, diclocymet, diethofencarb, edifenphos, ethaboxam, fenhexamid, fentin acetate, fenoxanil, ferimzone, fluazinam, fosetyl, fosetyl-aluminum, iprovalicarb, hexachlorobenzene, metrafenone, pencycuron, propamocarb, phthalide, toloclofos-methyl, quintozone
- 30 or zoxamide,
- strobilurins, such as azoxystrobin, dimoxystrobin, fluoxastrobin, kresoxim-methyl, metominostrobin, orysastrobin, picoxystrobin, pyraclostrobin or trifloxystrobin,
- sulfenic acid derivatives, such as captafol, captan, dichlofluanid, folpet or
- 35 tolylfluanid,
- cinnamides and analogous compounds, such as dimethomorph, flumetover or flumorph.

## Synthesis examples

With appropriate modification of the starting compounds, the procedures given in the synthesis examples below can be used to obtain further compounds I.

5

Example 1: Preparation of 5-cyano-6-(2,4,6-trichlorophenyl)-7-(4-methylpiperidiny)-1,2,4-triazolo[1,5a]pyrimidine

10 A solution of 0.4 g (0.92 mmol) of 5-chloro-6-(2,4,6-trichlorophenyl)-7-(4-methylpiperidiny)-1,2,4-triazolo[1,5a]pyrimidine [cf. US 6,242,451] and 1.2 g (4.6 mmol) of tetrabutylammonium cyanide in 3 ml of acetonitrile was stirred at 60°C for 5 hours. The solvent was then distilled off, and the residue was purified by preparative MPLC on silica gel RP-18 using acetonitrile/water mixtures. This gave 0.2 g of the title compound as a colorless solid of m.p. 177-179°C.

15

<sup>1</sup>H-NMR (CDCl<sub>3</sub>, δ in ppm): 8.55 (s, 1H); 7.6 (s, 2H); 3.8 (m, 2H); 2.9 (m, 2H) 1.7 (m, 2H); 1.6 (m, 1H); 1.4 (m, 2H); 1.0 (d, 3H)

20 Example 2: Preparation of 5-methoxy-6-(2,4,6-trichlorophenyl)-7-(4-methylpiperidiny)-1,2,4-triazolo[1,5a]pyrimidine

1 g of 30% strength sodium methoxide solution was added to a solution of 0.2 g (0.46 mmol) of 5-chloro-6-(2,4,6-trichlorophenyl)-7-(4-methylpiperidiny)-1,2,4-triazolo[1,5a]pyrimidine [cf. US 6,242,451] in 3 ml of methanol, and the mixture was  
25 stirred at 60°C for about 2.5 hours. After removal of the solvent, the residue was purified by preparative MPLC on silica gel RP-18 using acetonitrile/water mixtures. This gave 0.02 g of the title compound as a yellow resin.

30 <sup>1</sup>H-NMR (CDCl<sub>3</sub>, δ in ppm): 8.25 (s, 1H); 7.5 (s, 2H); 4.0 (s, 3H); 3.55 (d, broad, 2H); 2.8 (t, broad, 2H); 1.6 (d, broad, 2H); 1.5 (m, 1H); 1.25-1.4 (m, 2H); 0.95 (d, 3H)

## Examples for the action against harmful fungi

35 The fungicidal action of the compounds of the formula I was demonstrated by the following tests:

The active compounds were prepared as a stock solution with 25 mg of active compound which was made up to 10 ml using a mixture of acetone and/or DMSO and the emulsifier Uniperol® EL (wetting agent having emulsifying and dispersing action  
40 based on ethoxylated alkylphenols) in a volume ratio of solvent/emulsifier of 99 to 1.

The mixture was then made up with water to 100 ml. This stock solution was diluted with the solvent/emulsifier/water mixture described to the concentration of active compounds stated below.

- 5    Use example 1 - Activity against net blotch of barley caused by *Pyrenophora teres*, protective application

10    Leaves of potted barley seedlings of the cultivar "Hanna" were sprayed to runoff point with an aqueous suspension having the concentration of active compounds stated below. 24 hours after the spray coating had dried on, the test plants were inoculated with an aqueous spore suspension of *Pyrenophora* [syn. *Drechslera*] *teres*, the net blotch pathogen. The test plants were then placed in a greenhouse at temperatures between 20 and 24°C and 95 to 100% relative atmospheric humidity. After 6 days, the extent of the development of the disease was determined visually in % infection of the entire leaf area.

20    In this test, the plants which had been treated with 250 ppm of the compound of example 1 showed an infection of about 1%, whereas the untreated plants were 90% infected.

- 20    Use example 2 - Activity against gray mold on bell-pepper leaves caused by *Botrytis cinerea*, protective application

25    Bell-pepper seedlings of the cultivar "Neusiedler Ideal Elite" were, after 2 to 3 leaves were well developed, sprayed to runoff point with an aqueous suspension having the concentration of active compounds stated below. The next day, the treated plants were inoculated with a spore suspension of *Botrytis cinerea* which contained  $1.7 \times 10^6$  spores/ml in a 2% aqueous biomold solution. The test plants were then placed in a dark acclimatized chamber at 22 to 24°C and high atmospheric humidity. After 30    5 days, the extent of the fungal infection on the leaves could be determined visually in %.

In this test, the plants which had been treated with 250 ppm of the compound of example 1 showed an infection of about 7%, whereas the untreated plants were 100% infected.
